Main Content Area:

Evaluation & Award
RFQ-2026-0042 — Landscape Lighting — Phase 2

Selection Methods: [Lowest Cost](#) [Weighted Scoring](#) [AI Recommended](#)

Supplier Ranking
Full RFQ ranking requires a positive price for every item. Weighted scoring uses the current quote total, average item quality and latest delivery date; missing quality or delivery uses supplier history.

Rank	Supplier	Quote	Delivery	Years	Price
1	B	\$3,178.90	22 days	3 years	\$3,178.90
2	A	\$6,945.75	18 days	2 years	\$6,945.75

Segregate by Line Item [Segregate](#)
Auto-assign each item to its cheapest quoting supplier. Review and reassign items below.

Historical Supplier Performance

Price, Delivery, Quality

Legend: A (Blue), B (Green)

Recommended Award

B
\$3,178.90 · budget difference \$6,321.10

[Award Full RFQ](#)

[Split Award \(per-line cheapest\)](#)

01 Prepare

Find or add items in the catalogue. Create an RFQ with quantities and specifications.

02 Invite

Assign qualified suppliers to the full RFQ or chosen lines, then publish.

03 Collect

Suppliers select their portal profile and upload quote documents for assigned RFQs.

04 Check

Use Quote Comparison to verify rates, delivery and quality against the originals.

05 Decide

Compare Lowest Cost, Weighted Scoring or AI recommendations. Review allocations and award.

06 Trace

Use Reports and Audit & Compliance to monitor decisions and investigate errors.

Open: <https://rfq-app-puce.vercel.app>

The screenshots show local sample data. Your RFQs, suppliers and available controls may differ by role.

Choose manual or AI upload

- 01 Open Create RFQ and choose Manual for the four-step form, or AI Upload for document extraction.
- 02 AI Upload is available to roles with AI permission. The paid AI call starts only when you run extraction.
- 03 You can return from Manual to this choice with Choose another method.

Create RFQ choice: every control

Open Create RFQ

Select Create RFQ or New RFQ in the sidebar, dashboard or RFQ list. The first screen asks how to prepare items.

Manual

Select Manual to open Details, Items, Suppliers and Review. You can search the catalogue, add blank lines or import Excel within Items.

AI Upload

Select AI Upload to open AI Document Import. Upload a document, verify extracted lines and create the RFQ from the corrected Basic view.

Permission

AI Upload appears only when the role has AI permission. Paid AI processing begins when Extract items is selected, not when the card opens.

Find your starting point

- 01 Use the left menu to open RFQs, sourcing, evaluation, the supplier portal, reports or admin tools.
- 02 Choose New RFQ to start sourcing. Notifications at the top show recent workflow events.
- 03 The selected role controls which pages and actions appear. Ask an administrator to change a role.

Dashboard: every control

Navigation

Use the left menu to move between sourcing, supplier, evaluation, reporting and admin pages. On a narrow screen, open the menu with the top-left button.

Summary cards

The dashboard counts requests and responses and summarizes spend. Open the linked RFQ to inspect the underlying record.

Charts and lists

Category and activity charts show trends; the active-RFQ list gives a shortcut to current work. Supplier summaries show historical performance.

New RFQ shortcut

Select New RFQ to open the four-step request form. The action is available only to roles allowed to create RFQs.

Notifications

Open the bell to see workflow events. Select Mark all read when enabled; a read-only role cannot change notification state.

Role preview

Use the role selector to preview a role and its available pages. This prototype selector is not individual user sign-in.

- 01 Search by Item Name, AI Name, SKU, MPN or other source fields; filter by Category and Subcategory.
- 02 Use First, Previous, Next and Last to browse 100 items per page. Scroll sideways for all nine columns.
- 03 New Item creates one record; Add from spreadsheet appends rows. It does not replace the whole catalogue.

Item Catalogue: every control

Find an item

Type a name, AI Name, SKU or MPN in Search catalogue. Add Category and Subcategory filters to narrow the matches.

Browse the full sheet

The table preserves all nine Fully_edited columns. Scroll horizontally; First, Previous, Next and Last move through 100-row pages.

Add or edit one item

Select New Item or the pencil on a row. Item Name is required. Enter the remaining source fields, then Save or Cancel.

Catalogue columns

Item Name, AI Name, Description, SKU, Category, Subcategory, Usage unit, Part Number (MPN), and Unit Name follow the source sheet.

Append a spreadsheet

Add from spreadsheet accepts XLSX, XLS or CSV. Rows are added; this control does not replace the existing catalogue.

Delete and history

The trash action removes a row. An item with recorded purchases shows a price-history chart in its edit drawer.

- 01** Choose Manual first, then enter the title, category, currency, deadline and terms in Details.
- 02** In Items, search the full catalogue or import a document. Review quantities and specifications.
- 03** Select suppliers, check Review, then Save as Draft or Publish RFQ. Publishing requires that permission.

Create RFQ: every control

Step 1 - Details

Enter the required title, then description, category, USD/INR/EUR currency, optional deadline and validity, delivery location, terms and budget.

Supporting documents

The form lets you select specifications, drawings or compliance files and displays their names. Check the saved RFQ before relying on file access.

Step 2 - Items

Search the catalogue and add matching items, import from Excel, or Add item for a blank line. At least one line is required.

Edit each line

Check item name, specification, description, brand, model, part number, quantity, UOM, delivery date, notes and extra requirements.

Step 3 - Suppliers

Filter or search suppliers and select recipients. At least one is needed to reach Review. Check qualification and category fit.

Step 4 - Review

Recheck details, item quantities and selected suppliers. Save as Draft stores the request; Publish RFQ assigns all selected suppliers.

- 01** Open RFQs to find an existing request. Search by number or title, then open its details.
- 02** The status indicates where the request sits: draft, published, responses, evaluation or award.
- 03** Open the detail page to check scope, invited suppliers, responses and next actions.

RFQs: every control

Find a request

Search RFQs by number, title or buyer. Use the status chips to limit the list to All, Open, Awarded, Closed or Expired.

Read the list

Each row shows an RFQ identifier, title, category, status, deadline, supplier/quote counts and budget where available.

Open a record

Select a row to see the complete request, invited suppliers, line items, responses and downstream actions.

Status meaning

Draft is unsent; Published/response states are active; Awarded records a decision; Closed/Cancelled are no longer active.

Deadline

Expired is a time-based list filter for an overdue, still-open request. It does not mean the RFQ has been awarded.

Create

New RFQ opens the form. Save as Draft first if you need to check the line items or assignment before publication.

- 01** Check the item list, quantities, deadline, assignments and response state before evaluation.
- 02** Authorized roles can publish, cancel, compare quotes or record delivery and supplier ratings.
- 03** Existing RFQ and quote records remain available as procurement history.

RFQ detail: every control

Header and progress

The workflow tracker and status badge show the stage. Review the title, request number, deadline and commercial terms.

Publish or cancel

A permitted role can publish a draft or cancel an active RFQ. These status actions affect the supplier workflow.

Item details

Read each line's quantity, unit, specification and required delivery date. Use Assign Suppliers to correct the scope before quotes arrive.

Invited suppliers

The supplier list shows assignments and quote state. Follow the links to compare responses when enough quotes exist.

Clarifications

Supplier questions appear in Clarifications. Check them alongside the original RFQ before editing or evaluating a quote.

Delivery and rating

After award, record each supplier's expected date, Mark delivered, then Rate supplier. The page tracks one bulk shipment per supplier.

Award and terms

The award panel shows the recorded winner or split and amount. Side details retain delivery location, payment terms and other RFQ metadata.

- 01** Choose an RFQ, search suppliers and inspect qualification, tags and performance scores.
- 02** Assign the full RFQ or selected line items. Confirm the assigned item list before sending.
- 03** An invitation on a draft also publishes it, so the role needs Publish RFQ permission.

Assign Suppliers: every control

Select the RFQ

Choose the request at the top. A draft assignment also publishes the RFQ, so the role needs publish permission.

Choose line scope

Tick line items for a partial invitation; select all for the whole request. Edit Items opens an editor for line details.

Find a supplier

Search by name, filter by category or tag, and inspect qualification, rating and scores. An unqualified supplier cannot be assigned.

Invite and remove

Full RFQ invites the supplier for every line. Partial invites only selected lines. Current assignments can be removed before award.

Scoring weights

Open supplier-score weights to change the importance of price, quality and delivery in this assignment view.

Ratings and link

The star control records supplier feedback. Generate RFQ link produces a response route in the protected workspace; test access before sharing.

- 01 Search supplier profiles and review their category, qualification, tags and performance.
- 02 Add or edit supplier details before assigning them to RFQs. Qualified status affects eligibility.
- 03 Use ratings after delivery to keep future supplier comparisons informed.

Suppliers: every control

Find and filter

Search supplier name or tag. Category filters narrow the cards so buyers can find relevant vendors.

Add supplier

Enter name, category, email, phone, location and notes. Set qualification and tags, then Save.

Maintain a profile

Open the edit control to update contact data, category, qualification, tags and notes. Delete removes a profile.

Import list

Upload an XLSX or CSV supplier sheet to add multiple records. Review imported names and categories before assignment.

Qualification

Only qualified suppliers can be selected for a new assignment. Qualification should reflect a real vendor review.

Performance

Ratings and price/quality/delivery history inform future comparisons. Rate a supplier after delivery or from assignment.

Import a sourcing document

- 01 Upload a supported document and review the extracted items before saving them to an RFQ.
- 02 Correct names, quantities and specifications where the document was unclear.
- 03 AI extraction uses the paid AI API. Supported document uploads are limited to 50 MB each.

AI Import: every control

Choose a document

Upload XLSX, XLS, CSV, TXT, MD, PDF or a supported image, up to 50 MB per file, then select Extract items.

Extraction progress

Large PDFs and sheets are split into smaller parts and processed in parallel. Wait for all chunks and review any error.

Basic view

Each extracted source line appears separately. Correct names, quantities, UOM and specifications; add or remove a line if needed.

Clubbed view

Similar items can be grouped by the AI for review. Re-cluster reruns grouping. This view does not replace Basic as the RFQ source.

Verification

Open Verification and click a page/source label to check the source document. Repeated clicks cycle through multiple instances.

Multiple files and RFQ

Process another document to combine sources. When Basic is correct, Create RFQ carries those edited lines into the request.

AI billing

Extraction and clustering use the configured paid AI service. Inspect the imported output before making supplier decisions.

Choose a supplier profile

- 01 Open Supplier Portal and select the correct supplier profile for this protected workspace.
- 02 Only RFQs assigned to that supplier are listed in its portal view.
- 03 The profile picker is a demo selection; individual supplier authentication is a separate rollout step.

Supplier Portal: every control

Select a profile

Choose the supplier profile in this protected workspace. The picker is a demo selector, not a password-based vendor login.

Assigned requests

Only RFQs assigned to the selected supplier appear. Open a request and inspect the requested scope and quantities.

Upload a quote

Choose a quotation document and Upload quote document. The service extracts and matches quoted lines to the request.

Correct a response

Re-upload quote replaces or updates the submitted response. Buyers should verify the extracted rates in Quote Comparison.

Clarification

Enter a question under Clarifications and select Send; the buyer sees it on the RFQ detail page.

Sign out and files

Sign out clears the selected demo profile. Hosted original files are retained for 15 days; extracted records remain.

- 01 Select the assigned RFQ and check the required items, quantities and specifications.
- 02 Upload the supplier quote document; re-upload if a corrected quote is needed. Use Clarification for questions.
- 03 Original hosted files stay available for 15 days. Extracted quote data remains saved.

- 01** Choose an RFQ and inspect price, delivery date, quality and coverage for every supplier.
- 02** Correct extracted values before deciding. Download the original response or comparison if allowed.
- 03** Score quality and Process best suggestion call paid AI; review the suggested supplier against the quote data.

Quote Comparison: every control

Choose an RFQ

Select a request with at least two supplier quotes. The table places each supplier beside the same requested items.

Check coverage

Compare every line's supplier price, quantity, ETA, quality and specification. Missing or zero prices make a complete award ineligible.

Correct extraction

Edit a quote cell when the source document proves a different value. Wait for save to finish; reload saved values after an error.

Delivery and quality

Set a supplier-wide consignment ETA where needed. Score quality (AI) updates quality evidence; review its output against specifications.

Best suggestion

Process best suggestion calls paid AI with the displayed weighted criteria. Treat the recommendation as advice and check totals.

Download and forward

Download response retrieves an available original; Download comparison exports the table. Forward to Evaluation opens award review.

- 01** Lowest Cost ranks complete quotes by current quoted total. Missing or nonpositive prices cannot win.
- 02** Segregate shows the cheapest eligible supplier for each line; inspect every allocation before an award.
- 03** Award Full RFQ or Split Award records the decision. Check the allocation carefully before submitting.

Evaluation & Award: every control

Lowest Cost

The full-RFQ ranking uses quoted line price times requested quantity. A supplier needs a positive price on every line to qualify.

Segregate

Select Segregate to allocate each line to its cheapest priced supplier. Expand supplier cards, inspect each line and move it if needed.

Weighted Scoring

Set Price, Quality and Delivery weights, ideally totaling 100%. Evaluate quotes calculates per-item scores and an allocation.

AI Recommended

Set the weights and Run AI Recommendation. Review the supplier and reason for every line; AI calls use the paid service.

Award choices

Award Full RFQ uses an eligible complete supplier. Award this split uses the reviewed allocation. Split Award uses per-line cheapest.

Before finalizing

Check currency, quantity, line coverage, pricing, quality and ETA. Awarding records the decision; Reject All Quotes cancels it.

Approvals

Authorized HOD and Finance roles can record approvals. The Finance approval covers the costing sheet.

- 01** Weighted Scoring lets you adjust the Price, Quality and Delivery sliders; the total should equal 100%.
- 02** Scores use the current quote plus available quality and delivery data, with supplier history as fallback.
- 03** AI Recommended is another method. It can differ from Lowest Cost, so check the reason and prices.

- 01** Open Reports for overall RFQ activity and procurement performance summaries.
- 02** Use RFQ detail and Quote Comparison to inspect the records behind a summary.
- 03** Only roles with Reports permission can access this page.

Reports: every control

Overview

Use the summary cards for RFQ counts, responses and procurement totals. Charts break down status, category and supplier activity.

RFQ table

The report table ties metrics to individual requests. Open an RFQ to inspect a surprising total or status.

Supplier data

Supplier and category summaries help identify concentration, response and purchasing patterns.

Dates and status

An overdue request may show Expired in reports while its saved workflow status is still open.

Source of amounts

Award amounts come from recorded quote and allocation data. Verify corrected quote cells before relying on a summary.

Access

Reports require the reports.view permission; read-only roles may inspect without changing records.

- 01 Search Actions & Debug Logs by action, error or request ID; expand an entry for detail.
- 02 Use Download shown logs for a copy of the displayed matches. The activity log records decisions.
- 03 Debug logs retain up to 20,000 entries, 25 MB of content and 15 days; oldest entries rotate first.

Audit & Compliance: every control

Two records

The activity log tracks business events and decisions. Actions & Debug Logs capture operational events for diagnosis.

Investigate

Search by action, error text or request ID. Filter severity and expand a matching entry for details and timing.

Download

Download shown logs exports the currently displayed matches for review. Export access depends on the selected role.

Retention

Debug logs rotate at 20,000 entries, 25 MB or 15 days; the oldest entries are removed first. This is separate from business history.

Sensitive data

Debug entries avoid raw prompts, uploaded file contents and form values. Still treat exported logs as internal material.

When a request fails

Copy the request ID from the error, open Audit & Compliance and search it. Check the event sequence before retrying.

- 01 Administrator can open Roles & Access and create a role or edit an existing role.
- 02 Role cards show enabled, read-only and disabled status. Administrator is protected.
- 03 The role picker previews access; separate individual login and role assignments are needed for external users.

Roles & Access: every control

Role-only display

The UI presents role names rather than named people. The top selector previews what a chosen role can see.

Create a role

Administrator opens Roles & Access, selects Create role, enters a name and description, chooses permissions, then saves.

Edit a role

Select the pencil on a role card to change its permissions or restrictions. Administrator is protected from editing.

Workspace access

Enable workspace.view for internal RFQ pages. Turning it off removes dependent workspace permissions.

Read-only

Read-only overrides write permissions: it blocks edits, quote submissions, approvals and AI calls while preserving permitted views.

Disabled

Clear Role enabled to block the role. Use the role picker to verify the resulting navigation after a change.

Identity limit

The selector is a prototype access preview. Individual sign-in and server-side user-role assignments are needed for outside users.

Save changes

- 01 Give the role a clear name and description, then select only the permissions it needs.
- 02 Read-only blocks changes, submissions, approvals and AI calls. Disabling the role blocks access.
- 03 Save changes and use the role picker to verify the resulting pages and actions.

Permissions and controls: every control

Workspace

workspace.view opens internal pages; rfq.create and rfq.publish control request creation and invitation.

Evaluation

rfq.evaluate controls evaluation updates; award.decide records awards or rejection; ai.use permits paid AI actions.

Approvals

approve.hod and approve.finance record the two approval states. Finance approval covers costing.

Suppliers

supplier.manage changes supplier records; portal.access opens the portal; quote.submit allows quote submission.

Oversight

reports.view opens Reports; audit.view opens Audit & Compliance; data.export permits available downloads.

Administration

Only Administrator manages roles. Permissions are shared by role; read-only and disabled restrictions override them.

Before choosing a supplier: every control

1. Verify the scope

Compare the RFQ lines and requested quantities with every supplier response. Check partial invitations and missing lines.

2. Verify price

Correct any OCR/extraction mistakes. Use the same currency; compare extended line totals, not just unit prices.

3. Check eligibility

A full award needs a qualified supplier with positive prices on all lines. Split allocation can use priced partial responses.

4. Check nonprice factors

Inspect specification fit, quality score, ETA and supplier history. Weighted or AI results can differ from cheapest.

5. Review each allocation

Expand the supplier cards and verify which vendor has each line. Move a line to another priced vendor when justified.

6. Record the decision

Use Award Full RFQ or Award this split only after reviewing totals and approvals. The decision is kept in RFQ history.

Troubleshooting and good practice

I cannot see a page or button

Check the selected role. Administrator can inspect permissions in Roles & Access.

An item is missing

Search by SKU, MPN or AI Name. Catalogue results have 100-row pages; narrow the search.

An upload fails

Use a supported file under 50 MB. If processing fails, keep the request ID shown in the error.

The supplier choice looks wrong

Check missing/zero rates, item quantities, delivery and quality. Compare the chosen method with Lowest Cost.

A quote is not visible

Confirm the correct RFQ and supplier profile, then check that the supplier was assigned.

I need the original quote file

Use Download response in Quote Comparison. Hosted originals are kept for 15 days.

I need to trace an error

Open Audit & Compliance, search its request ID, then expand the matching debug entry.

For outside users, add individual authentication and server-side role assignments before wider access.
